

Alternatives Update

John Gambla, CFA, FRM, PRM, Senior Vice President | Robb Guttschow, CFA, Senior Vice President

Commentary | 12/31/25

In the fourth quarter of 2025, alternative investments ("alternatives") on average had solid positive returns comparable to U.S. equity returns but underperforming global equity markets. Investor attention has continued to focus on artificial intelligence ("AI"). Economic data offered a similar profile to the prior quarter: solid growth (gross domestic product, or GDP), a soft job market, and sticky inflation. The Federal Reserve (the "Fed") lowered the Fed Funds rate by 25 basis points ("bps") at each of its two meetings during the quarter, leaving the policy rate at 3.75%. Despite rates being 175 bps below their peak, inflation remaining well above the Fed's 2% target, and various forms of fiscal stimulus set to roll out in 2026, the executive branch has continued to call for even lower interest rates. The sharp move in commodities, gold in particular, might be interpreted as one corner of the capital markets voicing an opinion on the future path of inflation. Countering this narrative is the growing optimism and apprehension surrounding AI, which is expected to boost productivity and corporate profits but could also displace workers, potentially contributing to deflationary pressures. Equity valuations remain at historic extremes, yet investors appear largely unfazed (see Figure 1). There is some concern that a significant portion of global growth, the U.S. in particular, is being driven by the outsized capital expenditures related to AI and the energy infrastructure necessary to support it without clarity into the long-term return on investment.

Alternatives delivered positive performance in eight out of ten categories during the fourth quarter, although none could keep up with the torrid pace of equities. Commodities led all categories with a gain of 5.85%, followed by Managed Futures, which returned 2.77%. Real Estate and Multi-Strategy were the only two categories posting negative returns. Eight of ten alternatives categories underperformed the S&P 500® Index, but the average shortfall was modest at approximately 120 bps. By contrast, seven of ten alternatives categories outperformed the Bloomberg U.S. Aggregate Bond Index (the "BB Agg"), with an average outperformance of 35 bps (see Figures 2 and 3).

Figure 1: U.S. Equity Valuation Ratio Percentile	S&P 500® Index		Russell 2000® Index		Nasdaq-100® Index	
	12/31/25	12/31/24	12/31/25	12/31/24	12/31/25	12/31/24

Traditionally, managed futures and macro strategies are viewed as having lower correlations to equities because they are diversified across a variety of markets and often employ short selling as part of their investment approach. Strategies with lower 2-year correlations to U.S. equities (less than .60), on average, marginally outperformed those with higher correlations in the fourth quarter. The performance spread was only 8bp (Figure 4). Two of the three real asset categories posted positive returns, while real estate declined. Gold continued its bull run in the fourth quarter (+11.93%) (Figure 5). Gold outperformed all traditional asset categories and year-to-date was up 64.58% for 2025. Real assets, as a category, returned an average of 28.04% for 2025.

Cryptocurrencies diverged sharply from most other assets in the fourth quarter experiencing a broad and very sharp selloff. Bloomberg Galaxy Crypto Index was down -30.36%. Bitcoin fell -23.55%, while Ethereum dropped -29.03% and Ripple and Litecoin also lost substantial ground (-35.98% and -28.60%, respectively) (Figure 6). Cryptocurrency thefts and hacks were estimated at over \$200 million during the fourth quarter and exceeded \$2.75 billion for full-year 2025. North Korea, China, Iran, and Russia remain the largest source of state-sponsored crypto theft and the sophistication of these attacks is growing which represents a very real threat to the long-term viability of the sector.

Returns for major asset classes were mostly positive across the in the fourth quarter of 2025, with both commodities and international equities posting sizeable returns. The U.S. dollar remained stable and posted a small gain (+0.26%). U.S equities had a solid quarter (+2.66%). Long-duration U.S. Treasuries (20+ years) fell (-0.93%), despite a dovish Fed as economic growth remained solid. (Figure 7). A steepening yield curve caused real interest to increase across most maturities, with Treasury bills as a notable exception. Treasury yields moved higher even as the consumer price index ("CPI") edged marginally lower (see Figure 8). Lower real rates are generally associated with easing financial conditions, while higher real rates are indicative of tightening financial conditions.

Definitions

Bitcoin: A digital currency using encryption techniques created for use in peer-to-peer online transactions. Introduced in 2008 by a person or group using the name Satoshi Nakamoto.

Bloomberg Galaxy Crypto Index (BB Galaxy Crypto): The BGCI is designed to measure the performance of the largest cryptocurrencies traded in USD.

Commodities: The Bloomberg Commodity Index is made up of exchange-traded futures on physical commodities and represents 20 commodities, which are weighted to account for economic significance and market liquidity.

Consumer Price Index (CPI): A measure that examines the weighted average of prices of a basket of consumer goods and services, such as transportation, food, and medical care. It is calculated by taking price changes for each item in the predetermined basket of goods and averaging them. Changes in the CPI are used to assess price changes associated with the cost of living.

Convertible Arbitrage: The Credit Suisse AllHedge Convertible Arbitrage Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of convertible arbitrage funds. Convertible Arbitrage is a strategy that involves taking simultaneous long and short positions in a convertible bond and its underlying stock.

Correlation: A statistical measure that quantifies the extent to which two or more data series fluctuate together. Values run from -1.0 to +1.0.

Cryptocurrency: A digital or virtual currency that is secured by cryptography, which makes it nearly impossible to counterfeit or double-spend.

Emerging Markets: The MSCI Emerging Markets Index captures large and mid cap representation across Emerging Markets (EM) countries. The index covers 85% of the free float-adjusted market capitalization in each country.

Equity Long/Short: The Credit Suisse AllHedge Long/Short Equity Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of long/short equity funds. Long/short equity funds typically invest in both long and short sides of equity markets, generally focusing on diversifying or hedging across particular sectors, regions or market capitalizations. Managers typically have the flexibility to shift from value to growth; small to medium to large capitalization stocks; and net long to net short. Managers can also trade equity futures and options as well as equity related securities and debt or build portfolios that are more concentrated than traditional long-only equity funds.

Equity Market Neutral: The Credit Suisse AllHedge Equity Market Neutral Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of equity market neutral funds. Equity market neutral funds typically take both long and short positions in stocks while seeking to reduce exposure to the systematic risk of the market (i.e., a beta of zero is desired). Equity Market Neutral funds typically seek to exploit investment opportunities unique to a specific group of stocks, while maintaining a neutral exposure to broad groups of stocks defined for example by sector, industry, market capitalization, country, or region. The index has a number of subsectors including statistical arbitrage, quantitative long/short, fundamental long/ short and index arbitrage. Managers often apply leverage to enhance returns.

Ethereum: Ethereum is a platform that offers programming code of any decentralized application. It has been linked to payment style transactions. Ether is the cryptocurrency issued through open-source code executed on thousands of nodes.

Event Driven: The Credit Suisse AllHedge Event Driven Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of event driven funds. Event driven funds typically invest in various asset classes and seek to profit from potential mispricing of securities related to a specific corporate or market event. Such events can include: mergers, bankruptcies, financial or operational stress, restructurings, asset sales, recapitalizations, spin-offs, litigation, regulatory and legislative changes as well as other types of corporate events. Event driven funds can invest in equities, fixed income instruments (investment grade, high yield, bank debt, convertible debt and distressed), options and various other derivatives. Many managers may use a combination of strategies and adjust exposures based on the opportunity sets in each subsector.

Fixed Income Arbitrage: The Credit Suisse AllHedge Fixed Income Arbitrage Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of fixed income arbitrage funds. Fixed income arbitrage funds typically attempt to generate profits by exploiting inefficiencies and price anomalies between related fixed income securities. Fixed income arbitrage funds seek to limit volatility by hedging out exposure to the market and interest rate risk. Strategies may include leveraging long and short positions in similar fixed income securities that are related either mathematically or economically. The sector includes credit yield curve relative value trading involving interest rate swaps, government securities and futures; volatility trading involving options; and mortgage-backed securities arbitrage (the mortgage-backed market is primarily U.S.-based and over-the-counter).

Global Macro: The Credit Suisse AllHedge Global Macro Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of global macro funds. Global macro funds typically focus on identifying extreme price valuations and leverage is often applied on the anticipated price movements in equity, currency, interest rate and commodity markets. Managers typically employ a top-down global approach to concentrate on forecasting how political trends and global macroeconomic events affect the valuation of financial instruments. Profits can be made by correctly anticipating price movements in global markets and having the flexibility to use a broad investment mandate, with the ability to hold positions in practically any market with any instrument. These approaches may be systematic trend following models, or discretionary.

Gold: The return of the gold spot price as quoted as U.S. dollars per Troy Ounce.

Inflation: Is the decline of purchasing power of a given currency over time.

High-Yield Bonds: The Bloomberg US High Yield Very Liquid Index (VLI) is a component of the US Corporate High Yield Index that is designed to track a more liquid component of the USD-denominated, high yield, fixed-rate corporate bond market. The US High Yield VLI uses the same eligibility criteria as the US Corporate High Yield Index, but includes only the three largest bonds from each issuer that have a min amount outstanding of USD500mn and less than five years from issue date.

International Developed: The MSCI EAFE Index is designed to represent the performance of large and mid-cap securities across 21 developed markets, including countries in Europe, Australasia and the Far East, excluding the U.S. and Canada. The index is a free-float weighted equity index.

Litecoin: A peer-to-peer cryptocurrency and open source software project similar to Bitcoin, Litecoin uses blockchain technology to process transactions. Litecoin, referred to as an alt-coin can process blocks faster than Bitcoin, uses a different mining algorithm and has larger supply.

Managed Futures: BarclayHedge US Managed Futures Industry Top 50 (BTOP 50) Index. The Index seeks to replicate the overall composition of the managed futures industry with regard to trading style and overall market exposure.

Multi-Strategy: The Credit Suisse AllHedge Multi-Strategy Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of multi-strategy funds. Multi-strategy funds typically are characterized by their ability to allocate capital based on perceived opportunities among several hedge fund strategies. Through the diversification of capital, managers seek to deliver consistently positive returns regardless of the directional movement in equity, interest rate or currency markets. The added diversification benefits may reduce the risk profile and help to smooth returns, reduce volatility and decrease asset-class and single-strategy risks. Strategies adopted in a multi-strategy fund may include, but are not limited to, convertible bond arbitrage, equity long/short, statistical arbitrage and merger arbitrage.

Nasdaq-100 Index® includes 100 of the largest domestic and international non-financial companies listed on The Nasdaq Stock Market based on market capitalization.

Nominal Yield: Is the annualized rate of return on a bond without accounting for inflation or expenses.

Real Assets are physical and/or tangible investments such as real estate, commodities (including gold, oil, and natural resources) and infrastructure whose intrinsic value is derived from their use.

Real Estate: The Dow Jones US Real Estate Index is designed to track the performance of real estate investment trusts (REITs) & other companies that invest directly or indirectly in real estate through development, management or ownership, including property agencies.

Real Yield: or Real Interest Rate has been adjusted to remove the effects of inflation to reflect the real cost of funds to the borrower and the real yield to the lender or to an investor.

Ripple Digital Assets: Known as XRP, Ripple is a cryptocurrency that can be used on open source distributed ledger created by the company Ripple. It is built upon the principles of blockchain as an on-demand option for faster cross border payments.

Russell 2000® Index is comprised of the smallest 2000 companies in the Russell 3000® Index.

Trend Following is an investment strategy that identifies and invests in assets that are showing a consistent directional market trend (either upward or downward) over a set period of time via a systematic approach.

U.S. Aggregate Bonds: The Bloomberg US Aggregate Bond Index is a broad-based benchmark that measures the investment grade, US dollar-denominated, fixed-rate taxable bond market.

U.S. Equities: The S&P 500® Index. An unmanaged index of 500 companies used to measure large-cap U.S. stock market performance.

U.S. Dollar: The U.S. Dollar Index (USDX) indicates the general international value of the U.S. dollar. The USDX does this by averaging the exchange rates between the USD and major world currencies. The ICE US computes this by using the rates supplied by some 500 banks.

U.S. Treasury: ICE US Treasury 20+ Years Bond Index consists of publicly-issued U.S. Treasury securities that have a remaining maturity greater than 20 years and have \$300 million USD or more of outstanding face value, excluding amounts held by the Federal Reserve System.

U.S. Treasury Yield: Yield of U.S. Treasury securities maturing in approximately 3 months, 2 years, 5 years, 10 years, or 30 years.

Year-over-Year (YoY): is a calculation that helps compare growth over the previous 12 months and automatically negates the effect of seasonality.
