

Alternatives Update

John Gambla, CFA, FRM, PRM, Senior Vice President | Rob Guttschow, CFA, Senior Vice President

Commentary | 3/31/26

In the first quarter of 2026, alternative investments (“alternatives”) on average had solid positive returns and even better relative returns as capital markets struggled around the globe, especially U.S. equities. Investor focus shifted from “AI” (Artificial Intelligence) to the war with Iran. As a result of the conflict, commodity volatility spiked dramatically and most prices soared. Not surprisingly commodities dominated asset returns, with energy up nearly 60%, while industrials, precious metals and agricultural sectors outpaced most other asset classes. Private equity and private credit markets, which have been all the rage these past couple of years, were a bit more in the spotlight during the quarter, and not in a positive way. Some high-profile private credit funds have had to invoke gating on their redemptions as investors sought liquidity from their portfolios. Equity valuations have come down but remain quite elevated from a historical perspective (see Figure 1). Valuations at these levels would typically prompt caution in the best of macro-environments, and given the highly volatility geopolitical environment, they may represent a heightened vulnerability for investors.

Economic data offered little in the way of support, including declining estimates of GDP growth (revised past and future expected), a tepid job market, and strongly accelerating inflation. The Federal Reserve (the “Fed”) did not change interest rates at either of their two meetings, leaving rates at 3.50-3.75%. Concurrently, the U.S. debt position continues to deteriorate. The latest debt figures have total U.S. debt at \$38 trillion. \$2 trillion was added in 2025 and is projected to grow another \$1 trillion by the middle of 2026. Current interest payments on this debt continue to mount and are now over \$1.2 trillion. The stagflationary environment appears to be gaining momentum over the past several quarters with no sign of ending while debt is exploding thus placing the Fed between the hammer and the anvil. Markets rarely move in a straight line and over the past decade investors have generally been rewarded for time in the market, not risk aversion. Last quarter’s asset return profile might be an indication that caution and a bit more focus on non-equity components of the portfolio may be worth consideration depending on investor objectives and risk tolerance. It remains to be seen whether recent developments in private credit are isolated or indicative of broader market stress.

Alternatives delivered positive performance in eight out of ten categories during the first quarter, though none could keep up with the torrid pace of equities. Commodities dominated all categories with a gain of 24.41%, which exceeded the return for all of 2025 (+15.77%). Managed futures also had a strong quarter (+6.53%). Equity long/short and fixed income arbitrage were the only two categories that posted negative returns, but still handily outperformed U.S. equities. All ten categories outperformed the S&P 500® Index, with the average outperformance being quite large (854 basis points). Eight of ten alternatives categories outperformed the Bloomberg U.S. Aggregate Bond Index (“BB Agg”), with an average outperformance of 425 basis points (see Figures 2 and 3).

Average	8.54%	4.25%

Past performance is not a guarantee of future results. Source for all charts: Bloomberg. As of 3/31/26.

Traditionally, managed futures and macro strategies are viewed as having lower correlations to equities because they are diversified across a variety of markets and often employ shorting as part of their approach. Strategies that had lower two-year correlations to U.S. equities (less than 0.60), on average, significantly outperformed those that had higher correlations. The performance spread was 514 basis points (Figure 4). All three real asset categories were positive with broad-based commodities leading the way. Gold continued to move higher (+8.07%) (Figure 5) but was off substantially from intra-quarter highs, likely serving as a source of liquidity amidst the disruption of the war with Iran. Real Assets as a category were up sharply (+11.32%) as a stark contrast to financial assets.

Cryptocurrencies continued a downward trend and once again demonstrated that they have not historically behaved as flight-to-quality assets, as the sector experienced another quarter of steep double-digit declines. The Bloomberg Galaxy Crypto Index was down 26.55%. Bitcoin fell 22.20%, while Ethereum dropped 29.27% and Ripple and Litecoin also lost substantial ground (-26.95%, -29.49% respectively) (Figure 6). Thefts/hacks of cryptocurrencies totaled an estimated \$150+ million in the first quarter, which was a substantial decline from the nearly \$1.6 billion in the first quarter of 2025 and a slight decline from the \$200M+ of the prior quarter. Nonetheless, security remains an issue and nefarious state-sponsored actors continue to plague the sector.

Returns for major asset classes were mostly flat to negative in the first quarter of 2026. The U.S. dollar remained relatively stable and posted a small gain (+0.99%). U.S. equities had a very rough quarter (-4.33%). Long-duration U.S. Treasuries (20+ years) were essentially unchanged (+0.15%), despite the global upheaval (Figure 7). Real interest rates increased substantially across the entire curve as Treasury rates moved higher despite a marginally lower CPI (Figure 8). Lower real interest rates generally point toward easing financial conditions, while higher real interest rates may indicate tightening financial conditions.

Definitions

Bitcoin: A digital currency using encryption techniques created for use in peer-to-peer online transactions. Introduced in 2008 by a person or group using the name Satoshi Nakamoto.

Bloomberg Galaxy Crypto Index (BB Galaxy Crypto): The BGCI is designed to measure the performance of the largest cryptocurrencies traded in USD.

Commodities: The Bloomberg Commodity Index is made up of exchange-traded futures on physical commodities and represents 20 commodities, which are weighted to account for economic significance and market liquidity.

Consumer Price Index (CPI): A measure that examines the weighted average of prices of a basket of consumer goods and services, such as transportation, food, and medical care. It is calculated by taking price changes for each item in the predetermined basket of goods and averaging them. Changes in the CPI are used to assess price changes associated with the cost of living.

Convertible Arbitrage: The Credit Suisse AllHedge Convertible Arbitrage Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of convertible arbitrage funds. Convertible Arbitrage is a strategy that involves taking simultaneous long and short positions in a convertible bond and its underlying stock.

Correlation: A statistical measure that quantifies the extent to which two or more data series fluctuate together. Values run from -1.0 to +1.0.

Cryptocurrency: A digital or virtual currency that is secured by cryptography, which makes it nearly impossible to counterfeit or double-spend.

Emerging Markets: The MSCI Emerging Markets Index captures large and mid cap representation across Emerging Markets (EM) countries. The index covers 85% of the free float-adjusted market capitalization in each country.

Equity Long/Short: The Credit Suisse AllHedge Long/Short Equity Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of long/short equity funds. Long/short equity funds typically invest in both long and short sides of equity markets, generally focusing on diversifying or hedging across particular sectors, regions or market capitalizations. Managers typically have the flexibility to shift from value to growth; small to medium to large capitalization stocks; and net long to net short. Managers can also trade equity futures and options as well as equity related securities and debt or build portfolios that are more concentrated than traditional long-only equity funds.

Equity Market Neutral: The Credit Suisse AllHedge Equity Market Neutral Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of equity market neutral funds. Equity market neutral funds typically take both long and short positions in stocks while seeking to reduce exposure to the systematic risk of the market (i.e., a beta of zero is desired). Equity Market Neutral funds typically seek to exploit investment opportunities unique to a specific group of stocks, while maintaining a neutral exposure to broad groups of stocks defined for example by sector, industry, market capitalization, country, or region. The index has a number of subsectors including statistical arbitrage, quantitative long/short, fundamental long/ short and index arbitrage. Managers often apply leverage to enhance returns.

Ethereum: Ethereum is a platform that offers programming code of any decentralized application. It has been linked to payment style transactions. Ether is the cryptocurrency issued through open-source code executed on thousands of nodes.

Event Driven: The Credit Suisse AllHedge Event Driven Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of event driven funds. Event driven funds typically invest in various asset classes and seek to profit from potential mispricing of securities related to a specific corporate or market event. Such events can include: mergers, bankruptcies, financial or operational stress, restructurings, asset sales, recapitalizations, spin-offs, litigation, regulatory and legislative changes as well as other types of corporate events. Event driven funds can invest in equities, fixed income instruments (investment grade, high yield, bank debt, convertible debt and distressed), options and various other derivatives. Many managers may use a combination of strategies and adjust exposures based on the opportunity sets in each subsector.

Fixed Income Arbitrage: The Credit Suisse AllHedge Fixed Income Arbitrage Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of fixed income arbitrage funds. Fixed income arbitrage funds typically attempt to generate profits by exploiting inefficiencies and price anomalies between related fixed income securities. Fixed income arbitrage funds seek to limit volatility by hedging out exposure to the market and interest rate risk. Strategies may include leveraging long and short positions in similar fixed income securities that are related either mathematically or economically. The sector includes credit yield curve relative value trading involving interest rate swaps, government securities and futures; volatility trading involving options; and mortgage-backed securities arbitrage (the mortgage-backed market is primarily U.S.-based and over-the-counter).

Global Macro: The Credit Suisse AllHedge Global Macro Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of global macro funds. Global macro funds typically focus on identifying extreme price valuations and leverage is often applied on the anticipated price movements in equity, currency, interest rate and commodity markets. Managers typically employ a top-down global approach to concentrate on forecasting how political trends and global macroeconomic events affect the valuation of financial instruments. Profits can be made by correctly anticipating price movements in global markets and having the flexibility to use a broad investment mandate, with the ability to hold positions in practically any market with any instrument. These approaches may be systematic trend following models, or discretionary.

Gold: The return of the gold spot price as quoted as U.S. dollars per Troy Ounce.

Inflation: Is the decline of purchasing power of a given currency over time.

High-Yield Bonds: The Bloomberg US High Yield Very Liquid Index (VLI) is a component of the US Corporate High Yield Index that is designed to track a more liquid component of the USD-denominated, high yield, fixed-rate corporate bond market. The US High Yield VLI uses the same eligibility criteria as the US Corporate High Yield Index, but includes only the three largest bonds from each issuer that have a min amount outstanding of USD500mn and less than five years from issue date.

International Developed: The MSCI EAFE Index is designed to represent the performance of large and mid-cap securities across 21 developed markets, including countries in Europe, Australasia and the Far East, excluding the U.S. and Canada. The index is a free-float weighted equity index.

Litecoin: A peer-to-peer cryptocurrency and open source software project similar to Bitcoin, Litecoin uses blockchain technology to process transactions. Litecoin, referred to as an alt-coin can process blocks faster than Bitcoin, uses a different mining algorithm and has larger supply.

Managed Futures: BarclayHedge US Managed Futures Industry Top 50 (BTop 50) Index. The Index seeks to replicate the overall composition of the managed futures industry with regard to trading style and overall market exposure.

Multi-Strategy: The Credit Suisse AllHedge Multi-Strategy Index is a subset of the Credit Suisse AllHedge Index that measures the aggregate performance of multi-strategy funds. Multi-strategy funds typically are characterized by their ability to allocate capital based on perceived opportunities among several hedge fund strategies. Through the diversification of capital, managers seek to deliver consistently positive returns regardless of the directional movement in equity, interest rate or currency markets. The added diversification benefits may reduce the risk profile and help to smooth returns, reduce volatility and decrease asset-class and single-strategy risks. Strategies adopted in a multi-strategy fund may include, but are not limited to, convertible bond arbitrage, equity long/short, statistical arbitrage and merger arbitrage.

Nasdaq-100 Index® includes 100 of the largest domestic and international non-financial companies listed on the Nasdaq Stock Market based on market capitalization.

Nominal Yield: Is the annualized rate of return on a bond without accounting for inflation or expenses.

Real Assets are physical and/or tangible investments such as real estate, commodities (including gold, oil, and natural resources) and infrastructure whose intrinsic value is derived from their use.

Real Estate: The Dow Jones US Real Estate Index is designed to track the performance of real estate investment trusts (REITs) & other companies that invest directly or indirectly in real estate through development, management or ownership, including property agencies.

Real Yield: or Real Interest Rate has been adjusted to remove the effects of inflation to reflect the real cost of funds to the borrower and the real yield to the lender or to an investor.

Ripple Digital Assets: Known as XRP, Ripple is a cryptocurrency that can be used on open source distributed ledger created by the company Ripple. It is built upon the principles of blockchain as an on-demand option for faster cross border payments.

Russell 2000® Index is comprised of the smallest 2000 companies in the Russell 3000® Index.

Trend Following is an investment strategy that identifies and invests in assets that are showing a consistent directional market trend (either upward or downward) over a set period of time via a systematic approach.

U.S. Aggregate Bonds: The Bloomberg US Aggregate Bond Index is a broad-based benchmark that measures the investment grade, US dollar-denominated, fixed-rate taxable bond market.

U.S. Equities: The S&P 500® Index. An unmanaged index of 500 companies used to measure large-cap U.S. stock market performance.

U.S. Dollar: The U.S. Dollar Index (USDX) indicates the general international value of the U.S. dollar. The USDX does this by averaging the exchange rates between the USD and major world currencies. The ICE US computes this by using the rates supplied by some 500 banks.

U.S. Treasury: ICE US Treasury 20+ Years Bond Index consists of publicly-issued U.S. Treasury securities that have a remaining maturity greater than 20 years and have \$300 million USD or more of outstanding face value, excluding amounts held by the Federal Reserve System.

U.S. Treasury Yield: Yield of U.S. Treasury securities maturing in approximately 3 months, 2 years, 5 years, 10 years, or 30 years.

Year-over-Year (YoY): is a calculation that helps compare growth over the previous 12 months and automatically negates the effect of seasonality.
