

# Many Investors Could Be Underweight Mid- & Small-Cap Stocks

## Total Net Assets In Large-, Mid- & Small-Cap Mutual Funds/ETFs

Source: Morningstar (U.S. Fund Categories).

### View from the Observation Deck

1. Today's blog post focuses on equity asset allocation via market capitalization (cap). In other words, how much capital do investors commit to U.S. large-, mid- and small-cap stocks. We use mutual fund and exchange-traded fund (ETF) asset levels as a barometer.
2. As indicated in the chart, as of 12/31/18, investors had positioned a combined \$5.766 trillion in the three large-cap categories, while allocating just \$0.906 trillion and \$0.686 trillion, respectively, to the mid- and small-cap categories.
3. Overall, of the \$7.358 trillion allocated to these nine categories as of 12/31/18, 78.4% is in large-cap stock portfolios.
4. In all three of the market caps featured in the chart, investors have favored the blended portfolios, which have exposure to both growth and value stocks.
5. The following four style/market caps featured in the chart were the only groups that had positive estimated net flows in 2018: \$144.554 billion (Large Blend); \$11.682 billion (Small Blend); \$10.734 billion (Mid-Cap Blend); and \$5.302 billion (Small Growth), according to Morningstar.
6. While risk tolerance is always an important factor in determining where to allocate investment capital, the fact that mutual fund and ETF investors have just 21.6% of their capital earmarked for U.S. stocks in mid- and small-caps is a bit surprising, in our opinion. Some investors may even fall short of that mark.
7. From 12/31/99 through 12/31/18, a period that included two severe bear markets, the S&P 500 Index posted an average annualized total return of 4.86%, compared to 8.67% and 9.15%, respectively, for the S&P MidCap 400 and S&P SmallCap 600 Indices, according to Bloomberg. In addition to outperforming their larger-cap counterparts in the new millennium, small-caps have outperformed in the current decade.
8. From 12/31/09 through 12/31/18, the S&P SmallCap 600 Index posted an average annual total return of 12.34%, compared to 11.31% and 11.72%, respectively, for the S&P MidCap 400 and S&P 500 Indices, according to Bloomberg.
9. Bloomberg's 2019 consensus earnings growth rate estimates for the S&P 500, S&P MidCap 400 and S&P SmallCap 600 Indices were 11.31%, 12.68% and 21.54%, respectively, as of 2/13/19.

The illustration excludes the effects of taxes and brokerage commissions and other expenses incurred when investing. There can be no assurance that any of the projections cited will occur. Past performance is no guarantee of future results. Investors cannot invest directly in an index. The S&P 500 Index is a capitalization-weighted index comprised of 500 stocks (currently 505) used to measure large-cap U.S. stock market performance. The S&P MidCap 400 Index is a capitalization-weighted index that tracks the mid-range sector of the U.S. stock market. The S&P Small Cap 600 Index is a capitalization-weighted index that tracks U.S. stocks with a small market capitalization.
