**Fund Description**

The First Trust Tactical High Yield ETF is an actively managed exchange-traded fund. Under normal market conditions, the fund will invest in high-yield debt securities, including U.S. and non-U.S. corporate debt obligations, bank loans and convertible bonds.

- The fund intends to maintain both long and short positions in securities. The fund's long positions may total up to 130% of the fund's net assets. The fund's short positions will range between 0% and 30% of the fund's net assets.
- The fund may take short positions in U.S. Treasury securities and/or corporate debt obligations, which may be rated investment grade or deemed to be high-yield securities.
- This long/short strategy is designed to capitalize on investment opportunities through various market cycles.

**Fund Advisor**

The portfolio is selected and managed by the First Trust Advisors' Leveraged Finance Investment Team.

- The team uses a combination of a rigorous fundamental credit selection process with relative value analysis and believes that an evolving investment environment offers varying degrees of investment risk opportunities in the high-yield, senior loan, derivative and fixed-income instrument markets.
- In order to capitalize on attractive investments and effectively manage potential risk, the team believes that the combination of thorough and continuous credit analysis, market evaluation, diversification, long and short positions and the ability to reallocate investments among senior and subordinated debt and derivatives may allow them to achieve higher risk-adjusted returns.
- Fundamental analysis involves the evaluation of industry trends, management quality, collateral adequacy, and the consistency of corporate cash flows. Through fundamental credit analysis, the Leveraged Finance Investment Team can position the portfolio in securities that they believe will provide the most attractive relative value in the market.

Performance data quoted represents past performance. Past performance is not a guarantee of future results and current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and shares when sold or redeemed, may be worth more or less than their original cost. You can obtain performance information which is current through the most recent month-end by visiting www.ftportfolios.com.

130-day SEC yield is calculated by dividing the net investment income earned per share during the most recent 30-day period by the maximum offering price per share on the last day of the period.

*NAV returns are based on the fund’s net asset value which represents the fund’s net assets (assets less liabilities) divided by the fund’s outstanding shares. After Tax Held returns represent return after taxes on distributions. Assumes shares have not been sold. After Tax Sold returns represent the return after taxes on distributions and the sale of fund shares. Returns do not represent the returns you would receive if you traded shares at other times. Market Price returns are based on the midpoint of the bid/ask spread on the stock exchange on which shares of the fund are listed for trading as of the time that the fund’s NAV is calculated. Returns are average annualized total returns, except those for periods of less than one year, which are cumulative. After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on the investor’s tax situation and may differ from those shown. The after-tax returns shown are not relevant to investors who hold their fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts.

**Indexes do not charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown. Indexes are unmanaged and an investor cannot invest directly in an index.

**“Long” and “short” are investment terms used to describe ownership of securities. To buy securities is to “go long.” The opposite of going long is “selling short.” Short selling is an advanced trading strategy that involves selling a borrowed security. Short sellers make a profit if the price of the security goes down and they are able to buy the security at a lower amount than the price at which they sold the security short.

**ETF Characteristics**

The fund lists and principally trades its shares on The Nasdaq Stock Market LLC. Investors buying or selling fund shares on the secondary market may incur customary brokerage commissions. Market prices may differ to some degree from the net asset value of the shares. Investors who sell fund shares may receive less than the share’s net asset value. Shares may be sold throughout the day on the exchange through any brokerage account. However, unlike mutual funds, shares may only be redeemed directly from the fund by authorized participants, in very large creation/redemption units. If the fund’s authorized participants are unable to proceed with creation/redemption orders and no other authorized participant is able to step forward to create or redeem, fund shares may trade at a discount to the fund’s net asset value and possibly face delisting.

**Risk Considerations**

The fund’s shares will change in value and you could lose money by investing in the fund. The fund is subject to management risk because it is an actively managed portfolio. In managing the fund’s investment objectives, the advisor will apply investment techniques and risk analyses that may not have the desired result. There can be no assurance that the fund’s investment objectives will be achieved.

The fund is subject to market risk. Market risk is the risk that a particular security owned by the fund or shares of the fund in general may fall in value. High-yield securities, or “junk” bonds, are subject to greater market fluctuations and risk of loss than securities with higher ratings, and therefore, may be highly speculative. These securities are issued by companies that may have limited operating history, narrowly focused operations, and/or other impediments to the timely payment of periodic interest and principal at maturity. The market for high-yield securities is smaller and less liquid than that for investment grade securities.

High-yield securities are subject to credit risk, interest rate risk, income risk and prepayment risk. Credit risk is the risk that an investor of a security will be unable or unwilling to make dividends, interest and/or principal payments when due and that the value of a security may decline as a result. Interest rate risk is the risk that if interest rates rise, the prices of the fixed-rate instruments held by the fund may fall. Income risk is the risk that if interest rates fall, the income from the fund’s portfolio will decline as the fund intends to hold floating-rate debt that will adjust lower with falling interest rates. Prepayment risk is the risk that during periods of falling interest rates, an issuer may exercise its right to pay principal on an obligation earlier than expected. This may result in a decline in the fund’s income.

Companies that issue bank loans tend to be highly leveraged and thus are more susceptible to the risks of interest deferral, default and/or bankruptcy. Senior floating rate loans, in which the fund may invest, are usually rated below investment grade but may also be unrated. As a result, the risks associated with these loans are similar to the risks of high-yield fixed income instruments. Loans are subject to prepayment risk. The degree to which borrowers prepay loans may be affected by general business conditions, the financial condition of the borrower and competitive conditions among loan investors, among others. The fund may not be able to reinvest the proceeds received on terms as favorable as the prepaid loan.

The market values of convertible bonds tend to decline as interest rates increase and, conversely, to increase as interest rates decline. A convertible bond’s market value also tends to reflect the market price of the common stock of the issuing company.

The fund may invest in distressed securities and many distressed securities are illiquid or trade in low volumes and thus may be more difficult to value. In times of unusual or adverse market, economic, regulatory or political conditions, the fund may not be able, fully or partially, to implement its short selling strategy. Short selling creates special risks which could result in increased volatility of returns and may result in greater gains or greater losses.

The fund invests in securities of non-U.S. issuers which are subject to higher volatility than securities of U.S. issuers. Because the fund’s NAV is determined on the basis of U.S. dollars and the fund invests in non-U.S. securities, you may lose money if the local currency of a non-U.S. market depreciates against the U.S. dollar.

The fund will, under most circumstances, effect a portion of creations and redemptions for cash, rather than in-kind transactions. As a result, the fund may be less tax-efficient. First Trust Advisors L.P. is the advisor to the fund. First Trust Advisors L.P. is an affiliate of First Trust Portfolios L.P., the fund’s distributor.

**Definitions**

**Standard Deviation** is a measure of price variability (risk).

**Alpha** is an indication of how much an investment outperforms or underperforms on a risk-adjusted basis relative to its benchmark.

**Beta** is a measure of price variability relative to the market.

**Sharpe Ratio** is a measure of excess reward per unit of volatility.

**Correlation** is a measure of the similarity of performance.

**ICE BofAML US High Yield Constrained Index** tracks the performance of U.S. dollar denominated below investment grade corporate debt publicly issued in the U.S. domestic market but caps issuer exposure at 2%.
