

First Trust MLP and Energy Income Fund (FEI)

Investment Objective/Strategy - First Trust MLP and Energy Income Fund (the "Fund") in a non-diversified, closed-end management investment company. The Fund's investment objective is to seek a high level of total return with an emphasis on current distributions paid to common shareholders. Under normal market conditions, the Fund invests at least 85% of its managed assets in equity and debt securities of publicly traded MLPs, MLP-related entities and other energy sector and energy utility companies that the Fund's Sub-Advisor believes offer opportunities for growth and income.

There can be no assurance that the Fund's investment objectives will be achieved. The Fund may not be appropriate for all investors.

■ Oil & Gas Production	1.39%
■ Other	0.96%

Footnotes

- ¹ The NAV represents the fund's net assets (assets less liabilities) divided by the fund's common shares outstanding.
- ² Fund shares are purchased and sold on an exchange at their share price rather than net asset value (NAV), which may cause the shares to trade at a price greater than NAV (premium) or less than NAV (discount).
- ³ Most recent distribution paid or declared to today's date. Subject to change in the future. There is no guarantee that the fund will declare dividends.
- ⁴ Distribution rates are calculated by annualizing the most recent distribution paid or declared through today's date and then dividing by the most recent market price. The distribution consists of the sum of net investment income, net realized short-term capital gains, net realized long-term capital gains, and return of capital. Distribution rates may vary. Any distribution adjustment will not be reflected until after the declaration date for the next distribution. See the fund's 19a-1 Notices, if any, located under the "News & Literature" section of the website for estimates of distribution sources. Final determination of the source and tax status of all distributions paid in the current year will be made after year-end.
- ⁵ Leverage is a technique where a closed-end fund's manager borrows assets at one rate and invests the proceeds from the borrowed assets at another rate, seeking to increase yield and total return. Use of leverage can result in additional risk and cost, and can magnify the effect of any losses.
- ⁶ Total return is the combination of reinvested dividend income and reinvested capital gains distributions, at prices obtained by the Dividend Reinvestment Plan, if any, and changes in the NAV and Share Price. The NAV total return takes into account the fund's total annual expenses and does not reflect sales load. Past performance is not indicative of future results.
- ⁷ Market value information used in calculating the percentages is based upon trade date plus one recording of transactions, which can differ from regulatory financial reports (Forms N-CSR and N-Q) that are based on trade date recording of security transactions. Holdings are subject to change.

First Trust MLP and Energy Income Fund (FEI)

Risk Considerations

The fund is subject to risks, including the fact that it is a non-diversified closed-end management investment company. Investment return and market value of an investment in the fund will fluctuate. Shares, when sold, may be worth more or less than their original cost.

Because the fund is concentrated in securities issued by MLPs, MLP-related entities, and other energy and utilities companies, it will be more susceptible to adverse economic or regulatory occurrences affecting those industries, including high interest costs, high leverage costs, the effects of economic slowdown, surplus capacity, increased competition, uncertainties concerning the availability of fuel at reasonable prices, the effects of energy conservation policies and other factors.

The fund invests in securities of non-U.S. issuers which are subject to higher volatility than securities of U.S. issuers. Because the fund invests in non-U.S. securities, you may lose money if the local currency of a non-U.S. market depreciates against the U.S. dollar.

Use of leverage can result in additional risk and cost, and can magnify the effect of any losses.

The risks of investing in the fund are spelled out in the prospectus, shareholder report and other regulatory filings.
