<b>UXAP</b>   FT Vest U.S. Equity Uncapped Accelerator ETF	<b>2.0%</b>	<b>116.00%</b>

See the following page for risk considerations and other important information.

# Target Outcome Period Information | April

**The outcome values may only be realized for an investor who holds shares on the first day of the outcome period and continues to hold them on the last day of the outcome period.**

<sup>1</sup>FAPR seeks to shield investors from the first 10% of losses over the Target Outcome Period, before fees and expenses. GAPR and XAPR seek to shield investors against losses from the first 15% of losses over the Target Outcome Period, before fees and expenses. DAPR seeks to shield investors against losses from -5% to -30% over the Target Outcome Period, before fees and expenses. QCAP seeks to shield investors against losses from the first 20% of losses over the Target Outcome Period, before fees and expenses.

<sup>2</sup>The gross cap is before fees, expenses and taxes. The net cap is after fees and expenses, excluding brokerage commissions, trading fees, taxes and extraordinary expenses not included in the funds' management fee. The upside cap is set by a fund on the inception date of the Target Outcome Period and is dependent upon market conditions at the time. The cap investors will experience may be different than what is illustrated herein.

<sup>3</sup>For future outcome periods, if the FT Vest U.S. Equity Max Buffer ETF (the "Max Buffer ETF") is not able to set the buffer against 100% of the Underlying ETF losses while setting a cap of at least 7%, then it would seek the maximum buffer that allows for a cap of 7%. If the Max Buffer ETF can set the buffer against 100% of the underlying ETF losses, it will seek a predetermined cap that exceeds 7%. When conditions prevent the Max Buffer ETF from achieving the 7% cap, it will lower the cap range to seek to produce a minimum buffer of 20%.

<sup>4</sup>The 2% Target Upside Deductible is expected to remain constant for each Target Outcome Period. UXJA will not participate in the initial 2.0% of positive price return of the Underlying ETF (measured from when the FLEX Options were entered into) and will achieve gains only to the extent the Underlying ETF price return exceeds the Target Upside Deductible, measured at the end of the Target Outcome Period. If the Underlying ETF decreases over the Target Outcome Period the fund will experience all losses on a one-to-one basis.

<sup>5</sup>The Upside Rate of Return produced by the combination of FLEX Options held by the Fund is calculated at the commencement of each Target Outcome Period and will vary for each Target Outcome Period and depend upon market conditions (including, but not limited to, volatility), at the commencement of the Target Outcome Period. The Upside Rate of Return is provided after taking into account fees and expenses, the effect of which will lower the returns experienced by an investor.

***You should consider a fund's investment objectives, risks, and charges and expenses carefully before investing. Contact First Trust Portfolios L.P. at 1-800-621-1675 or visit [www.ftportfolios.com](http://www.ftportfolios.com) to obtain a prospectus or summary prospectus which contains this and other information about a fund. The prospectus or summary prospectus should be read carefully before investing.***

## Risk Considerations

**You could lose money by investing in a fund. An investment in a fund is not a deposit of a bank and is not insured or guaranteed. There can be no assurance that a fund's objective(s) will be achieved. Investors buying or selling shares on the secondary market may incur customary brokerage commissions. Please refer to each fund's prospectus and Statement of Additional Information for additional details on a fund's risks. The order of the below risk factors does not indicate the significance of any particular risk factor.**

ETF shares may only be redeemed directly from a fund by authorized participants in very large creation/redemption units. ETF shares may trade at a discount to net asset value and possibly face delisting.

Securities of small- and mid-capitalization companies may experience greater price volatility and be less liquid than larger, more established companies whereas large capitalization companies may grow at a slower rate than the overall market.

Since at the end of each Target Outcome Period a new cap and buffer are established based on the then current price of the underlying ETF, an investor who holds fund shares through multiple Target Outcome Periods may fail to experience gains comparable to the underlying ETF over time or recapture losses from prior Target Outcome Periods and may have losses that exceed those of the underlying ETF.

A fund that effects all or a portion of its creations and redemptions for cash rather than in-kind may be less tax efficient.

Current market conditions risk is the risk that a particular investment, or shares of the fund in general, may fall in value due to current market conditions. For example, changes in governmental fiscal and regulatory policies, disruptions to banking and real estate markets, actual and threatened international armed conflicts and hostilities, and public health crises, among other significant events, could have a material impact on the value of the fund's investments.

A fund is susceptible to operational risks through breaches in cyber security. Such events could cause a fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss.

Trading FLEX Options involves risks different than, and possibly greater than, investing directly in securities. A Target Outcome fund may experience substantial downside for FLEX Option positions and certain FLEX Option positions may expire worthless. There can be no guarantee that a liquid secondary market will exist for the FLEX Options and the FLEX Options may be less liquid than exchange-traded options.

In managing a fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not have the desired result.

Market risk is the risk that a particular security, or shares of a fund in general may fall in value. Securities are subject to market fluctuations caused by such factors as general economic conditions, political events, regulatory or market developments, changes in interest rates and perceived trends in securities prices. Shares of a fund could decline in value or underperform other investments as a result. In addition, local, regional or global events such as war, acts of terrorism, spread of infectious disease or other public health issues, recessions, natural disasters or other events could have significant negative impact on a fund.

A fund classified as "non-diversified" may invest a relatively high percentage of its assets in a limited number of issuers. As a result, a fund may be more susceptible to a single adverse economic or regulatory occurrence affecting one or more of these issuers, experience increased volatility and be highly concentrated in certain issuers.

A fund and a fund's advisor may seek to reduce various operational risks through controls and procedures, but it is not possible to completely protect against such risks. A fund also relies on third parties for a range of services, including custody, and any delay or failure related to those services may affect a fund's ability to achieve its objectives.

Certain funds have characteristics unlike many other traditional investment products and may not be appropriate for all investors.

The investment strategy is designed to deliver returns that match, or for the X series are approximately twice those of, the reference asset if a fund's shares are bought on the day on which a fund enters into the Flexible Exchange Options® ("FLEX Options") (i.e., the first day of a Target Outcome Period) and held until those FLEX Options expire at the end of the Target Outcome Period subject to a pre-determined upside cap, while limiting downside losses. If the Underlying ETF experiences gains during a Target Outcome Period, a fund will not participate in those gains on a one-to-one basis or beyond the cap. If an investor does not hold its fund shares for an entire Target Outcome Period, the returns realized by that investor may not match those a fund seeks to achieve. In the event an investor purchases fund shares after the first day of a Target Outcome Period or sells shares prior to the expiration of the Target Outcome Period, the value of that investor's investment in fund shares may not be buffered against a decline in the value of the reference asset and may not participate in a gain in the value of the reference asset up to the cap for the investor's investment period. A shareholder may lose their entire investment.
