Target Outcome ETFs®

BUFY

FT Vest Laddered International Moderate Buffer ETF

BUFY is an actively managed exchange-traded fund (ETF) that seeks capital appreciation by providing exposure to a laddered portfolio of FT Vest International Equity Moderate Buffer ETFs ("underlying ETFs") which are based on the price returns of the iShares® MSCI EAFE ETF ("EFA"). Each underlying ETF seeks to provide a 15% downside buffer with upside potential to a predetermined cap over a one-year Target Outcome Period.

Diversified Outcome Periods
One fund provides exposure to multiple funds with different sets of outcome values.

Turnkey Approach
One ticker solution to risk management using Buffer ETFs.

May Smooth Market Fluctuations
The underlying Buffer ETFs provide market exposure with historically less volatility.

International Equity Exposure
Exposure to equity market performance of developed markets, excluding the US & Canada.

A LADDERED APPROACH TO TARGET OUTCOME INVESTING

BUFY's underlying ETFs are designed to help equity investors maintain a level of protection in down markets while taking advantage of growth opportunities in up markets to a predetermined cap. The fund will invest in four Underlying ETFs, meaning that there will only be an Underlying ETF resetting its cap and refreshing its buffer every quarter. As a result, the fund's ability to take advantage of the rolling or "laddered" nature of the investments in the underlying ETFs will be limited.

The rolling or "laddered" nature of the underlying ETFs creates diversification of investment time period compared to the risk of buying or selling any one underlying ETF at any one time. While each underlying ETF provides for tactical investing among different funds, BUFY offers a way to easily implement the strategies with a one-ticket, laddered approach.

BUFY UNDERLYING ETFs AT INCEPTION AND TARGET OUTCOME VALUES RELATIVE TO EFA PRICE

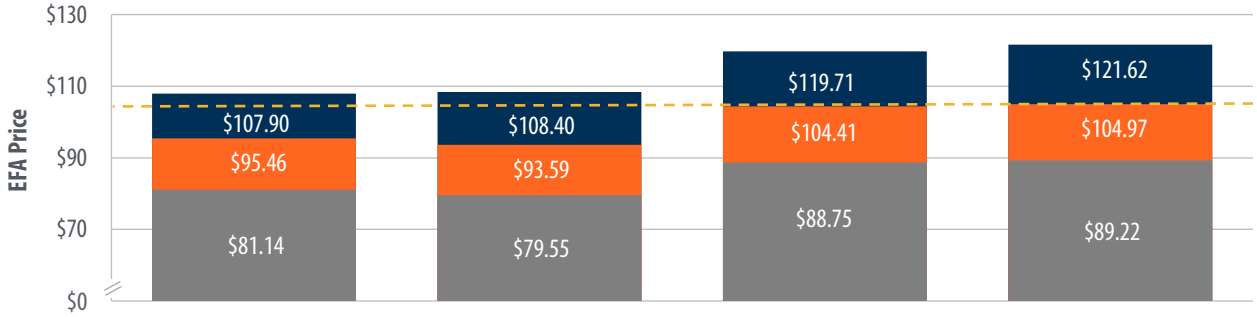
The chart below shows the initial cap and buffer values of BUFY's underlying ETF's relative to the price level of EFA at the start of each underlying ETF's current Target Outcome Period.

Value of EFA: $104.97
as of 9/18/26

Maximum Upside (Cap)

15% Buffer[1]
(Buffer Start Level)

Downside After Buffer
(Buffer End Level)



Target Outcome Period	YDEC 12/22/25-12/18/26	YMAR 3/23/26-3/19/27	YJUN 6/22/26-6/17/27	YSEP 9/21/26-9/17/27
Remaining Outcome Period (Months)	**6**	**9**	**12**	**12**
Initial Cap % (Gross)	13.03%	15.82%	14.65%	15.86%
Initial Cap % (Net)	12.13%	14.93%	13.76%	14.96%
EFA Value at Buffer Start Level	$95.46	$93.59	$104.41	$104.97

[1]The underlying ETFs seek to provide a buffer against the first 15% (before fees, expenses, and taxes) of EFA losses.

To understand the fund's strategy and risks, it is important to understand the strategies and risks of the underlying ETFs. BUFY does not provide any buffer against losses and does not seek to directly experience the full stated caps and buffers of the underlying ETFs. The Fund simply seeks to provide diversified exposure to all the underlying ETFs in a single investment. The upside cap for a fund is determined at the inception date of the Target Outcome Period in each calendar year. The cap and buffer levels may only be realized for an investor who holds shares for the outcome periods shown. The buffer is only provided by the underlying ETFs.

You should consider the fund's investment objectives, risks, and charges and expenses carefully before investing. Contact First Trust Portfolios L.P. at 1-800-621-1675 or visit www.ftportfolios.com to obtain a prospectus or summary prospectus which contains this and other information about the fund. The prospectus or summary prospectus should be read carefully before investing.

BUFY | FT Vest Laddered International Moderate Buffer ETF

Performance Summary (%) as of 6/30/26

Performance*	3 Month	YTD	1 Year	Since Fund Inception
Net Asset Value (NAV)	4.70	5.36	11.06	9.48
Market Price	4.70	5.36	11.06	9.51
Index Performance**				
MSCI EAFE Index	10.82	9.44	20.23	17.84

Performance data quoted represents past performance. Past performance is not a guarantee of future results and current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and shares when sold or redeemed, may be worth more or less than their original cost. You can obtain performance information which is current through the most recent month end by visiting www.ftportfolios.com.

BUFY Inception Date: 9/25/2024. Total Expense Ratio: 1.00%. Management Fees: 0.10%, Acquired Fund Fees and Expenses: 0.90%.

***NAV** returns are based on the fund's net asset value which represents the fund's net assets (assets less liabilities) divided by the fund's outstanding shares. **Market Price** returns are determined by using the midpoint of the national best bid offer price ("NBBO") as of the time that the fund's NAV is calculated. Returns are average annualized total returns, except those for periods of less than one year, which are cumulative. The fund's performance reflects fee waivers and expense reimbursements, absent which performance would have been lower.

**Performance information for each listed index is for illustrative purposes only and does not represent actual fund performance. Indexes do not charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown. Indexes are unmanaged and an investor cannot invest directly in an index.

RISK CONSIDERATIONS

You could lose money by investing in a fund. An investment in a fund is not a deposit of a bank and is not insured or guaranteed. There can be no assurance that a fund's objective(s) will be achieved. Investors buying or selling shares on the secondary market may incur customary brokerage commissions. Please refer to each fund's prospectus and Statement of Additional Information for additional details on a fund's risks. The order of the below risk factors does not indicate the significance of any particular risk factor.

There can be no assurance that an active trading market for fund shares will develop or be maintained.

Some Asian economies are highly dependent on trade with other countries and there is a high concentration of market capitalization and trading volume in a small number of Asian issuers as well as a high concentration of investors and financial intermediaries. Certain Asian countries experience expropriation and nationalization of assets, confiscatory taxation, currency manipulation, political instability, armed conflict and social instability as a result of religious, ethnic, socio-economic and/or political unrest. In particular, escalated tensions involving North Korea could have severe adverse effect on Asian economies. Recent developments between the U.S. and China have heightened concerns of increased tariffs and restrictions on trade.

Unlike mutual funds, shares of the fund may only be redeemed directly from a fund by authorized participants in very large creation/redemption units. If a fund's authorized participants are unable to proceed with creation/redemption orders and no other authorized participant is able to step forward to create or redeem, fund shares may trade at a premium or discount to a fund's net asset value and possibly face delisting and the bid/ask spread may widen.

A fund that invests in underlying ETFs that use FLEX Options to employ a "target outcome strategy" ("Underlying ETFs"), does not itself pursue a defined outcome strategy. The buffer is only provided by the Underlying ETFs and the fund itself does not provide any stated buffer against losses. There can be no guarantee that the Underlying ETFs will be successful in their strategy to buffer against losses. A fund may lose its entire investment in an Underlying ETF. To the extent a fund acquires shares of its Underlying ETFs in connection with creations and during reallocation, the fund typically will not acquire Underlying ETF shares on the first day of the target outcome period defined in the Underlying Fund's prospectus ("Target Outcome Period"). Likewise, to the extent a fund disposes of shares of an Underlying ETF in connection with redemptions and during reallocation, any such disposition typically will not incur on the last day of a Target Outcome Period.

A new Underlying ETF cap is established at the beginning of each Target Outcome Period and is dependent on prevailing market conditions. As a result, a cap may rise or fall from one Target Outcome Period to the next and is unlikely to remain the same for consecutive Target Outcome Periods.

If the Underlying ETF's reference security or index experiences gains during a Target Outcome Period, an Underlying ETF will not participate in those gains beyond the cap. In the event a fund purchases shares of an Underlying ETF after the first day of a Target Outcome Period and the Underlying ETF has risen in value to a level near the cap, there may be little or no ability for the fund to experience an investment gain on its shares; however, the fund will remain vulnerable to downside risk.

A fund may invest a significant percentage of its assets in a small number of ETFs. As a result, declines in the value or performance of one or more ETFs could have a significant negative impact on a fund's net asset value and your investment. A fund's performance will be largely dependent on the performance of these ETFs. In addition, if a fund holds a significant percentage of an ETF's outstanding shares, its purchases and sales may affect the ETF's size, market price, liquidity, bid/ask spreads, portfolio turnover, transaction costs, tax efficiency and ability to trade underlying securities advantageously. These risks may be greater for newer ETFs.

A fund may be subject to the risk that a counterparty will not fulfill its obligations which may result in significant financial loss to a fund.

Current market conditions risk is the risk that a particular investment, or shares of the fund in general, may fall in value due to current market conditions. For example, changes in governmental fiscal and regulatory policies, disruptions to banking and real estate markets, actual and threatened international armed conflicts and hostilities, and public health crises, among other significant events, could have a material impact on the value of the fund's investments.

A fund is susceptible to operational risks through breaches in cyber security. Such events could cause a fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss.

If a fund's Underlying ETF holds FLEX Options that reference EFA, the fund is subject to certain of the risks of owning shares of an ETF as well as the risks of the types of instruments in which EFA invests.

Equity securities may decline significantly in price over short or extended periods of time, and such declines may occur in the equity market as a whole, or they may occur in only a particular country, company, industry or sector of the market.

Political or economic disruptions in European countries, even in countries in which a fund is not invested, may adversely affect security values and thus the fund's holdings. A significant number of countries in Europe are member states in the European Union, and the member states no longer control their own monetary policies. In these member states, the authority to direct monetary policies, including money supply and official interest rates for the Euro, is exercised by the European Central Bank. The implications of the United Kingdom's withdrawal from the European Union are difficult to gauge and cannot yet be fully known.

Financial services companies are subject to the adverse effects of economic recession, currency exchange rates, government regulation, decreases in the availability of capital, volatile interest rates, portfolio concentration in geographic markets, industries or products, and competition from new entrants in their fields of business.

The Underlying ETFs invest in FLEX Options. Trading FLEX Options involves risks different from, or possibly greater than, the risks associated with investing directly in securities. An Underlying Fund may experience substantial downside from specific FLEX Option positions and certain FLEX Option positions may expire worthless. There can be no guarantee that a liquid secondary trading market will exist for the FLEX Options and FLEX options may be less liquid than exchange-traded options.

FLEX Options are subject to correlation risk and a FLEX Option's value may be highly volatile, and may fluctuate substantially during a short period of time. FLEX Options will be exercisable at the strike price only on their expiration date. Prior to the expiration date, the value of the FLEX Options will be determined based upon market quotations or other recognized pricing methods. In the absence of readily available market quotations for fund holdings, a fund's advisor may determine the fair value of the holding, which requires the advisor's judgement and is subject to the risk of mispricing or improper valuation.

A fund may be a constituent of one or more indices or models which could greatly affect a fund's trading activity, size and volatility.

Because Japan's economy and equity market share a strong correlation with the U.S. markets, the Japanese economy may be affected by economic problems in the U.S. Japan also has a growing economic relationship with China and other Southeast Asian countries. Should political tension increase, it could adversely affect the economy and destabilize the region as a whole. Japan also remains heavily dependent on oil imports, and higher commodity prices could therefore have a negative impact on the economy. Japanese securities may also be subject to lack of liquidity, excessive taxation, government seizure of assets, different legal or accounting standards and less government supervision and regulation of exchanges than in the U.S. Furthermore, the natural disasters that have impacted Japan and the ongoing recovery efforts have had a negative effect on Japan's economy, and may continue to do so.

Large capitalization companies may grow at a slower rate than the overall market.

The portfolio managers of an actively managed portfolio will apply investment techniques and risk analyses that may not have the desired result.

Market risk is the risk that a particular security, or shares of a fund in general may fall in value. Securities are subject to market fluctuations caused by such factors as general economic conditions, political events, regulatory or market developments, changes in interest rates and perceived trends in securities prices. Shares of a fund could decline in value or underperform other investments as a result. In addition, local, regional or global events such as war, acts of terrorism, spread of infectious disease or other public health issues, recessions, natural disasters or other events could have significant negative impact on a fund.

When a fund sells Underlying ETFs in the open market, the resulting gain or loss may have a negative impact on fund returns. In addition, a fund may effect a portion of its creations and redemptions for cash rather than in-kind, which may be less tax efficient. In addition, cash transactions may involve higher brokerage fees and taxes than in-kind transactions.

A fund faces numerous market trading risks, including the potential lack of an active market for fund shares due to a limited number of market makers. Decisions by market makers or authorized participants to reduce their role or step away in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of a fund's portfolio securities and a fund's market price.

Mid capitalization companies may experience greater price volatility than larger, more established companies.

Large inflows and outflows may impact a new fund's market exposure for limited periods of time.

A fund classified as "non-diversified" may invest a relatively high percentage of its assets in a limited number of issuers. As a result, a fund may be more susceptible to a single adverse economic or regulatory occurrence affecting one or more of these issuers, experience increased volatility and be highly concentrated in certain issuers.

Securities of non-U.S. issuers are subject to additional risks, including currency fluctuations, political risks, withholding, lack of liquidity, lack of adequate financial information, and exchange control restrictions impacting non-U.S. issuers.

A fund and a fund's advisor may seek to reduce various operational risks through controls and procedures, but it is not possible to completely protect against such risks. The fund also relies on third parties for a range of services, including custody, and any delay or failure related to those services may affect the fund's ability to meet its objective.

The prices of options are volatile and the effective use of options depends on a fund's ability to terminate option positions at times deemed desirable to do so. There is no assurance that a fund will be able to effect closing transactions at any particular time or at an acceptable price.

High portfolio turnover may result in higher levels of transaction costs and may generate greater tax liabilities for shareholders.

The market price of a fund's shares will generally fluctuate in accordance with changes in the fund's net asset value ("NAV") as well as the relative supply of and demand for shares on the exchange, and a fund's investment advisor cannot predict whether shares will trade below, at or above their NAV.

A fund may have temporary larger exposures to certain Underlying ETFs and under such circumstances, a fund's return would be more greatly influenced by the returns of the Underlying ETFs with the larger exposures.

An Underlying ETF's investment strategy is designed to deliver returns if shares are bought on the first day that the Underlying ETF enters into the FLEX Options and are held until the FLEX options expire at the end of the Target Outcome Period subject to the cap.

If a fund does not qualify as a RIC for any taxable year and certain relief provisions were not available, a fund's taxable income would be subject to tax at the fund level and to a further tax at the shareholder level when such income is distributed. Further, there may be other tax implications to a fund based on the type of investments in a fund.

Trading on an exchange may be halted due to market conditions or other reasons. There can be no assurance that a fund's requirements to maintain the exchange listing will continue to be met or be unchanged.

The fund's investment in shares of the Underlying ETFs subjects it to the risks of owning the securities held by the Underlying ETF, as well as the same structural risks faced by an investor purchasing shares of the fund.

An underlying ETF with investments that are concentrated in a single asset class, country, region, industry, or sector may be more affected by adverse events than the market as a whole.

A fund that invests in Underlying ETFs may provide returns that are lower than the returns that an investor could achieve by investing in one or more Underlying ETFs alone and the fund bears its proportionate share of each ETF's expenses, subjecting fund shareholders to duplicative expenses. A fund of Underlying ETFs does not itself pursue a defined outcome strategy and does not provide any buffer against Underlying ETF losses.
